## RESEARCH INTERESTS

---

My research lies at the intersection of **Physical Intelligence** and **3D vision**, currently focusing on **Vision Foundation Models for Automated Visual Inspection**. Building upon my background in **Visual Localization** and **3D Dense Captioning**, my primary interests are: (i) developing robust vision foundation models to bridge AI with physical reality, (ii) understanding complex scenes from images, point clouds, and multi-modal signals, and (iii) leveraging natural language and spatial context for comprehensive 3D scene comprehension.

## PROJECTS

---

**DeepGuider** | [GitHub](#) Apr. 2019 – May. 2023

- The DeepGuider Project is a national government-funded research project focused on developing a navigation guidance system that enables robots to navigate urban environments without the need for pre-mapping.
- I contributed by identifying clues to help locate autonomous robots, detecting and recognizing points of interest (POIs) in scene images, including text, landmarks, and doors for indoor-outdoor transitions, while also developing robust training methods to adapt to environmental changes.

**PRIDE: 3D Place Recognition In Dynamic Environment** | [GitHub](#) Mar. 2022 – Apr. 2023

- This work proposes a new dataset called PRIDE, which includes dynamic objects such as cars and pedestrians, for 3D place recognition in dynamic environments that are more realistic and challenging than current benchmarks.
- The proposed PRIDE-Net architecture with a new loss function focuses on extracting discriminative global descriptors and capturing global context using spatial information, while being robust to dynamic environments.
- Experiments on the PRIDE dataset and existing benchmarks show that our proposed method outperforms previous methods and that each proposed module effectively improves performance.
- The code will be released after acceptance.

**FCAT: Fully Convolutional Network with Self-Attention for Point Cloud based Place Recognition** | [GitHub](#) Dec. 2020 – Feb. 2022

- We construct a novel network named FCAT (Fully Convolutional network with a self-Attention unit) that can generate a discriminative and context-aware global descriptor for place recognition from the 3D point cloud.
- It features with a novel sparse fully convolutional network architecture with sparse tensors for extracting informative local geometric features computed in a single pass. It also involves a self-attention module for 3D point cloud to encode local context information between local descriptors.

**Bayesian Deep Learning course** | [Lecture](#) Feb. 2018 – Jul. 2018

- To understand deep learning papers, we explain the basic concepts of probability and Bayesian, and introduce papers related to Bayesian neural networks.
- This lecture can be taken through *edwith* of Naver Connect.

**Sketch based Face Image Generation with Text Mapping** | [GitHub](#) Sep. 2017 – Feb. 2018

- A typical sketch might have been uncomfortable when a person or program was used to map a person's features in detail. This process is limited not only because it is very complex and requires technicians, but also because it creates a feeling of incompatibility with real people.
- This program, named Metamon, makes a picture of a person's face by entering the image of the border sketch of the person's face and the text information that shows the characteristics of the face.

**Arduino & Raspberry Pi & Internet of Things (IoT) Tutorial** | [Project page](#) Dec. 2016 – Mar. 2017

- I create tutorial pages with Youtube videos and code for beginners in Arduino kit and Raspberry Pi development.
- I also introduce the concept of the Internet of Things (IoT) and work on a mini-project using *ThingSpeak*™.

**Sogang Navigation and Introduction (SNI)** | [Github](#) Mar. 2015 – Jul. 2015

- We develop a navigation system that introduces the internal facilities of each building and displays the shortest route and time from building to building using the Floyd-Washall algorithm.
- To build data for the development, we measured the time taken by walking directly on each path.

## SKILLS

---

**Programming:** Python, C, C++

**Frameworks:** Pytorch, TensorFlow/Keras

**Tools:** Git, VSCode, Vim, Docker, Slurm

**Others:** Arduino, Raspberry Pi

## PROFESSIONAL ACTIVITIES

---

### Reviewer of International Conferences

- European Conference on Computer Vision (ECCV) 2024
- IEEE/CVF International Conference on Computer Vision (ICCV) 2023, 2025
- IEEE/CVF Conference on Computer Vision and Pattern Recognition (CVPR) 2023, 2025
- Asian Conference on Computer Vision (ACCV) 2022
- International Conference on Learning Representations (ICLR) 2022, 2023
- Neural Information Processing Systems (NeurIPS) 2021, 2022, 2023, 2024

### Reviewer of International Journals

- International Journal of Computer Vision (IJCV) 2024
- IEEE Robotics and Automation Letters (RA-L) 2026
